Access Control for Up To 40 Doors & 2,000 People

High Security Identification Technology

In addition to magnetic stripe and wiegand technologies INOVA Master can provide the added security and convenience of the latest advances in identification technology...

- Smartcard... MIFARE®
- Proximity
- Biometric... fingerprint, iris, hand geometry, facial geometry

Technologies can be mixed to provide you with the desired degree of security for each area of a building and they can be added to virtually any installation without the need to remove existing equipment.

Operating Modes for a Variety of Applications & Security Levels

INOVA Master has a variety of operating modes that may be assigned individually to any door in the system to meet the varying security requirements of each area in your building...

- **Card-Only Mode...** cardholders gain access by using only their card at a reader. The door is unlocked if the card is authorized for that door at that time of day as determined by the access schedule assigned to the card.
- **Card+Pin Mode...** cardholders must enter a personal identification number (PIN) on the reader keypad after using their card at the reader.
- **Dual-Custody Mode...** requires any two authorized cardholders to gain entrance to a room.
- **Unlock-Pending Mode...** ensures that no door unlocks automatically until an employee is present.
- **Timed Anti-Passback Mode...** stops a person from reusing their card on the same door within a specified time period.
- **Escorted Dual-Custody Mode...** same as Dual Custody Mode but with the added security that one of the cardholders must be a designated escort.
- **Supervisor-Lockout Mode...** allows a supervisor to lockout all cards at a specific door until he/she returns to the department.

System Administration Made Easy

INOVA Master's Windows® software provides an easy-to-use interface for controlling your entire INOVA Master system...

- Assign access cards to users.
- Remove access cards from users.
- Assign access schedules to users... setting what times their cards are valid for each door for each day of the week plus holidays.
- Manually lock or unlock doors from the computer console.
- Assign automatic door unlock schedules to each door... setting what times each door will unlock for everyone to use and then relock for card access use.
- Assign operating modes to doors... card-only mode, card+pin mode, dual-custody mode, anti-passback mode, unlock-pending mode.
- Generate and review management reports.
- Multiple languages... English, French, Spanish, Dutch, Portuguese, Chinese.
- Runs on Windows95 through XP, with one free serial port per EventServer.

Up to 4
..... EventServers
per system

Up to 10
Doors per
EventServer

Management Reports Keep You In Control

Choose from a variety of reports preprogrammed for your convenience to help you manage your security system...

- **4 Activity Reports...** allows you to determine who went where and when. This record of movement provides the greatest return on your access control investment by making people aware that improper presence in an area will be discovered.
- **6 Attendance Reports...** provides department managers with basic attendance reports including total hours, late arrival, early departure, in/out, arrival/departure, and absentee.
- **6 Database Reports...** provides a record of the cardholder database and how all parameters of the system are programmed.

INOVA Master Single Door Controller...

An economical solution for stand alone single door applications, the INOVA Master Single Door Controller is complete with an integrated programming keypad. It supports all INOVA card readers and has a 2,000 card capacity. The programming keypad can be used after presenting a master programming card at the reader. A PC host with the INOVA Master software can be added to provide the complete range of INOVA Master features including dual custody access, access schedules, and timed door unlocking and locking.
